Relevant Experience

Amazon London

Software Dev Engineer *July 2025 – present*

- Improving Amazon's primary product ingestion API and adjacent systems for the world's largest product catalog
- Rearchitected the team's testing framework to better support AI-native development, while improving operational excellence through fixes to flaky pipeline tests and participation in a 24/7 on-call rota
- Developed novel AI-native tooling to allow for faster development of new features and easier onboarding for new joiners, gaining attention and interest from leaders and stakeholders up to 4 levels above me
- Delivered high-impact service improvements by extending a catalog deduplication service 2 weeks ahead of schedule and driving over-running GDPR data export work to completion by designing an export orchestrator
- Built automations for repetitive team workflows; sped up a manual catalog correction process by up to 4x

University of Glasgow Glasgow

Assistant Demonstrator *September 2024 – March 2025*

- Supported 65 students through weekly labs and 1-to-1 tutoring for the Algorithms and Data Structures 2 module
- Previously demonstrated Networks and Operating Systems 2 for 58 students, 2 hours a week, and ran 1-hour weekly drop-ins covering any second-year Computing Science module (Java, discrete maths, OOP, etc.)

Amazon Cambridge

Software Dev Engineer Intern *May 2024 – August 2024*

- Developed a React visualiser for Alexa's Named Entity Resolution (NER) and knowledge extraction APIs
- Conducted careful requirements gathering and design documentation for a variety of teams and stakeholders
- Designed an LLM evaluation metric for Alexa+ "experts", based on a semantic similarity model
- Integrated the metric as a new module in the team's evaluation framework, generating metrics 2x faster than existing tools, speeding up model iteration decisions
- Provided automated workflows for dataset preparation, tool configuration, and prompt generation

Decadecimal Nottingham/Glasgow

Roblox Game Developer *June 2018 – July 2025*

- Self-run freelance business, worked with Roblox-based clients to write Luau code for game project/task briefs
- Contributed to 700M+ play sessions on the platform, developed shop code and backend logic for a top 200 game
- Negotiated payment terms and met strict deadlines, providing regular detailed progress updates
- Provided product strategy consultancy services (documented advice on quality of existing proposals)

Competitive Programming/Hackathon Achievements

- 1st place team at JPMorganChase Code for Good 2024 (Glasgow, Playlist for Life charity)
- 2nd place team at Corgi AI hackathon (Y Combinator AI Startup School 2025)
- 2nd place team for GuitarGuitar challenge ("Do you have the GUTS?" hackathon 2023)
- 1st place team for Morgan Stanley challenge at Glasgow Uni Code Olympics 2021, 2nd overall team result
- 5th best individual HackerRank score at Glasgow Uni Code Olympics 2021 (only first-year student in the top 10)

Education

University of Glasgow Glasgow

BSc (Hons) Computing Science *September 2021 – July 2025*

- First Class Honours, prize-winner (for best final project and for contribution to the School of Computing Science)
- Final year GPA: 20.3/22.0, Honours GPA: 19.9/22.0, Excellence Scholarship Recipient
- Elected as President of Glasgow University Tech Society in 4th year, class representative in 1st, 3rd, and 4th year
- Final project accepted for publication at an academic conference ("RecViz: Intuitive Graph-based Visual Analytics for Dataset Exploration and Recommender System Evaluation", presented at ACM RecSys '25)

Technical Skills

Programming languages: Java, Python, C, C++, JavaScript, TypeScript, Swift, Lua/Luau, SQL
Others: HTML, CSS, React, SwiftUI, Vite, Next.js, AI-native development, Bash, Git, JUnit, Mockito, Spring Boot, Guice, AWS CDK / CloudWatch / CloudFormation / DynamoDB / EC2 / Lambda / S3
